

System Manager

the definitive answer for organizing your accounting software

CertiflexDimension

CertiflexDimension includes a diverse suite of results oriented accounting modules. Harnessing the power of these precision application modules requires intelligence and creativity. Menus to guide each user through their assignment must be presented, data in to and out of each program must be controlled, results oriented reports must be generated and restrictive security access must be monitored. These responsibilities and many others are astutely controlled in the background by the System Manager module. Performing like a seasoned veteran, this versatile software accurately administers all system overhead functions without operator intervention.

Backed by over 25 years of experience in innovative accounting software design

Outstanding accounting controls and data integrity

Intuitive task-oriented menu selections with user specific favorites

Minimize initial setup by intelligent record conversion from other systems

Eliminate redundant data entry with an easy-to-use accountant/client link

Advanced paperless document management support

Communicate with customers and suppliers through a built-in email portal

Instantly translate reports to industry standard searchable PDF files

Supports up to 50 workstations

System Manager processes, organizes, updates and reports an enormous volume of accounting data with incomparable speed. CertiflexDimension accounting software is designed exclusively for Pervasive.SQL scalable database. Exceptional reliability and unparalleled performance has made Pervasive the database of choice for many accounting software publishers.

The architecture employed assures that the system will never experience degradation in performance even as you increase usage. With CertiflexDimension System Manager, you have an accounting system designed to accommodate your business practices, not dictate them.

System Manager uses unique multiple company processing for up to 1200 companies. Inter-company consolidations, journal transactions and stock transfers are fully supported. A powerful multi-tasking organizer securely permits each user to conduct up to 8 accounting tasks simultaneously.

Delivering information in a rich, meaningful format

With over 400 standard reports, CertiflexDimension will meet the needs of the most demanding customers. Easily customize your business forms for the visual impact you desire. Select from over 40 preset financial statements, or format and deliver fiscal data in your own unique style. Of course, System Manager is always there to assist by remembering the 1500 optional selections chosen for every report for every company

Security without compromise

System Manager provides excellent administrative support to control access rights by setting the desired right-to-use level for each user. You can restrict access to running specific applications, companies, tasks and company/task combinations. Critical information such as payroll data and bank records can optionally require second-tier verification. Activity tracking monitors and records each authorized user's navigation throughout the system.

Business-critical data protection

Confidently protect your critical data with a simplified, reliable backup and restore program powered by System Manager. Backups for multiple companies, a specific company, or selected tasks within a company can be initiated. Media space requirements are minimized by industry standard 'Zip' file compression technology.

An abundant array of import/export options

Quick efficient strategic information exchange with other application software is essential to maximizing your software investment. System Manager applies common industry standards to incorporate a variety of data import and export tools. Import sales orders from a specialized order system or export detailed purchase history to a spreadsheet for further analysis. This and much more is easily handled by the flexible, intelligent, all-inclusive import/export features of System Manager.

Hardware requirements

Workstation:

- 500 MHz Intel or compatible processor (1.0 GHz recommended)
